

HDBC Converts to Natural Gas to Heat Buildings

Mar 12, 2009

The Halifax-Dartmouth Bridge Commission is proud to announce that we are now using natural gas to provide heat and hot water in our buildings. In January 2009 the last conversion took place to switch to natural gas in the administrative buildings and garages at the Macdonald and MacKay Bridges.

Natural gas is more environmentally friendly, efficient, economical and reliable than many other heat sources.
